

Sales Data Analysis Project

Project Overview

This project focuses on analyzing sales data to understand sales performance, identify best-selling products, and generate meaningful business insights using Python.

Technologies Used

- Python
- Pandas
- Matplotlib

Key Analysis Performed

- Data cleaning and validation
- Total and average sales calculation
- Best-selling product identification
- Sales trend visualization

Conclusion

The analysis provides a structured approach to handling real-world datasets and can be extended for advanced analytics.
